

ERRRES TV

ERRES / TV

*a gem-like
TV picture in
the luxurious setting
of a most stylish
TV cabinet:*

and so every single one of this entirely new range of ERRES models will play a proud new role in the home decorating scheme.

The cabinets alone are a most impressive example of refined craftsmanship: an elegant and distinctive profile combined with solid construction.

The precious veneer has been given several polyester enamel coats to protect it against scratches and stains. Export polishing has resulted in beautiful high-gloss finish, without losing any of the smart-looking wood grain effect. It is obvious that these models all have the 110° wide angle picture tube too. The entirely new concept underlying this most ingenious design has resulted in a trim and compact cabinet styling, carving inches from standard design sets. Thanks to its sleek and compact appearance, this receiver is a real space-saver, particularly when placed in a corner of your room.

The receiver itself is a model of technical perfection. It is packed with advanced performance features such as a new fully automatic control system ensuring unmatched picture stability, complete interference suppression and the easiest tuning ever!

Sporting events, newsreels, children's programmes and all the other TV favourites are brought right into your living room. You'll enjoy ERRES' picture crispness coupled with truly perfect sound reproduction.

In addition to the seven automatic stabilizers, these models also offer you the following outstanding features:

- a special device to prevent picture distortion, especially in reception areas in the direct vicinity of a TV station.
- an original chassis construction which, together with the special shape of the rear panel, considerably adds to ventilation and facilitates access for servicing.
- the possibility of fitting an UHF selector for the reception of stations that will in the future broadcast on channels 13 through 54.

And finally ERRES offers you the well-known push-buttons enabling you to tune to please your individual taste and preference.

model **TV 5625** 23" x 15 1/2" x 12"

*Distinction
of line and shape*

Distinction of line and shape

CHARACTERISTICS AND TECHNICAL DATA

Picture

110° picture tube, 59 cm (23").
Full-automatic horizontal synchronization (no horizontal knob).
Full-automatic picture control (picture width and height); the picture size is not affected by power fluctuations.
ERRES Golden Heart, the ultra cascode channel selector with the PCC 189 tube, ensuring optimum sensitivity.
Effective automatic gain control, ensuring a fine picture at high signal strength.
Automatic black level control.
Effective automatic interference suppression: the picture remains as firm as a rock.
Superior gradation through carefully constructed video amplifier.
Large bandwidth, making for perfect picture definition (sharpness).
Static focusing.

Sound

Very sensitive super-concertloudspeaker with unmatched reproduction. Push-buttons for bass and treble, enabling you to select the right sound to match.
Automatic interference limiter.
Connection for additional speaker.

General

Intercarrier sound system.
Antenna connection for 300 ohm twin lead.
19 valves, 4 germanium diodes and 1 silicium rectifier with a total of 40 functions.
Suitable for connection to 220 volts d/c or a/c (50/60 c.p.s.).
Especially for the CCIR models a provision has been made for building in a VHF unit, thus creating the possibility of receiving future stations on channels 13—54.
